

Feedback requested during the on-site, independent audit under the IRMA Standard for Responsible Mining of Eramet's Grande Côte Operations (GCO), Departments of Tivaouane (Thies Region) and Kébémér (Louga Region) Senegal

This coming January, SCS Global Services (SCS) auditors will be on-site as part of the ongoing third-party, independent audit of Eramet's Grande Côte Operations (GCO) mineral sands operation to evaluate its performance under the Initiative for Responsible Mining Assurance (IRMA) Standard for Responsible Mining.

The audit began in May 2023 with a desktop review of documents provided by the mine. This next on-site phase provides all affected stakeholders the opportunity to give feedback on the mine's environmental, health, safety, and community performance.

During the on-site part of the audit the auditors will ask local stakeholders, including community members and organizations, public officials, and non-management mine workers to participate in interviews or meetings, or to provide information using other means including email or on-line. SCS will use stakeholder comments to help determine how GCO performs relative to the IRMA Standard.

Please contact SCS if you would like to provide your views. You can do so by interview or in writing. Interviews can take place in person, or virtually (telephone or videoconference). Use the links, QR code, or email below to contact SCS to request an interview, ask questions, or provide comments. Commenters' identities and remarks are kept confidential upon request.

IRMA will publish the completed audit report at <https://responsiblemining.net>. The report will explain how SCS scored the mine site against the requirements of the 26 chapters of the IRMA Standard, and why. SCS will assign scores for each chapter. After the report is published, stakeholders may still comment on the mine's performance to help guide the operation's improvement as it moves through the IRMA 3-year audit cycle.

SCS is an IRMA-approved audit firm with head offices in Emeryville, California. For more information about SCS, please visit www.scsglobalservices.com.

The IRMA Standard is the world's most comprehensive mining standard for industrial-scale mines and the only one equally governed by all stakeholders: mining companies, mineral purchasers, investors, organized labor, communities, and civil society NGOs. Mine site verification under the IRMA Standard is voluntary. For more information on the IRMA Standard requirements and certification, visit www.responsiblemining.net.
